HOTEL MANAGEMENT SYSTEM

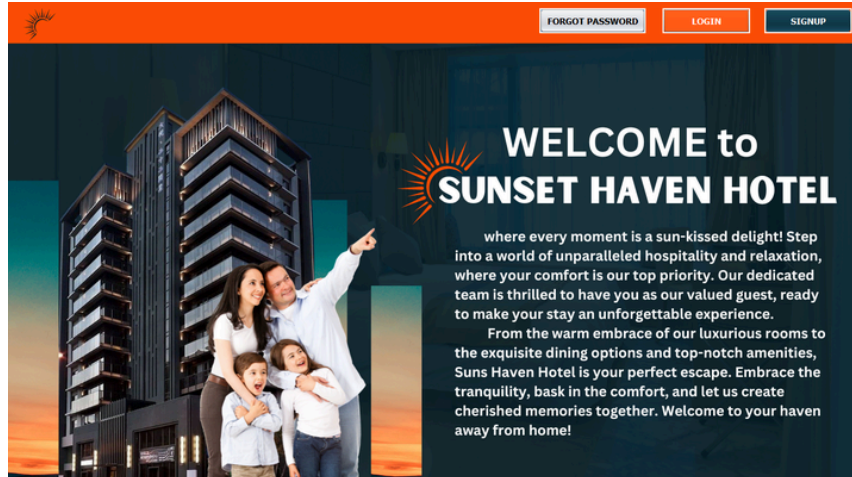

I. INTRODUCTION

A Hotel Management System (HMS) is a sophisticated software solution designed to streamline and automate the day-to-day operations of hotels and resorts. It integrates various functionalities to manage reservations, front desk operations, accounting, billing, guest management, and more. The system serves as the central nervous system of the hotel, orchestrating processes such as room bookings, guest interactions, financial transactions, and inventory management. With a focus on enhancing guest experiences, ensuring operational efficiency, and safeguarding sensitive data, the HMS plays a pivotal role in driving success and prosperity in the hospitality industry.

II. DISCUSSION OF THE SYSTEM FLOW

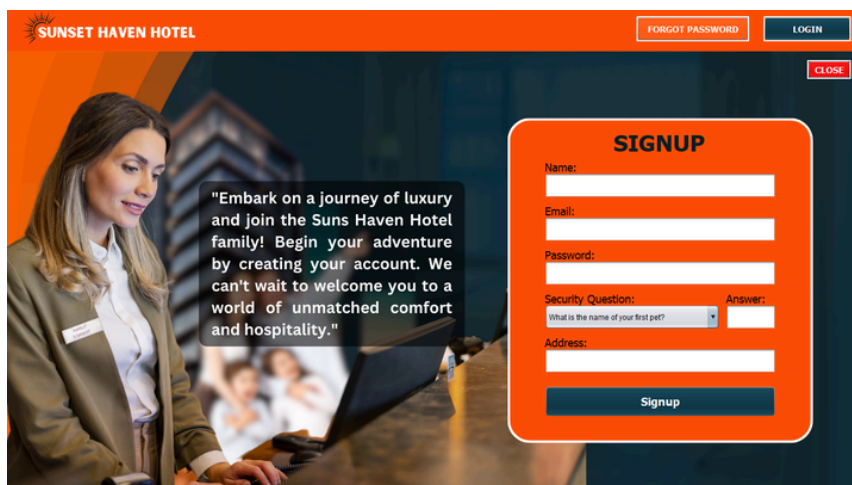

1. WELCOME PAGE

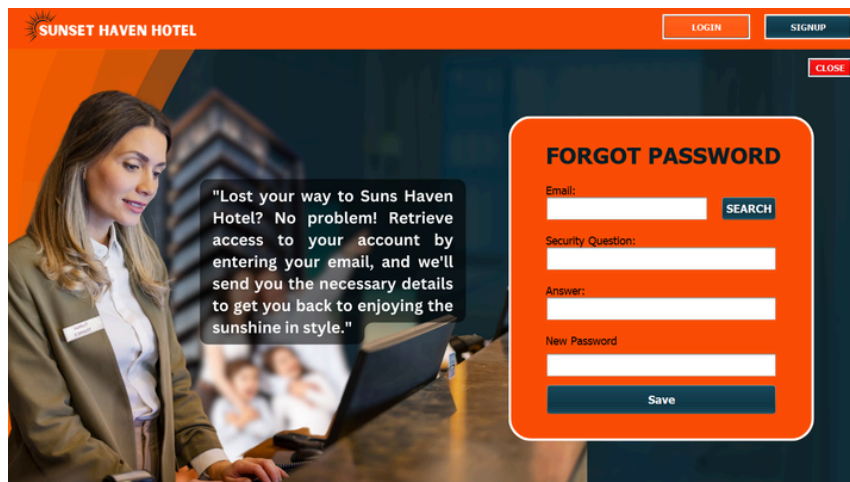

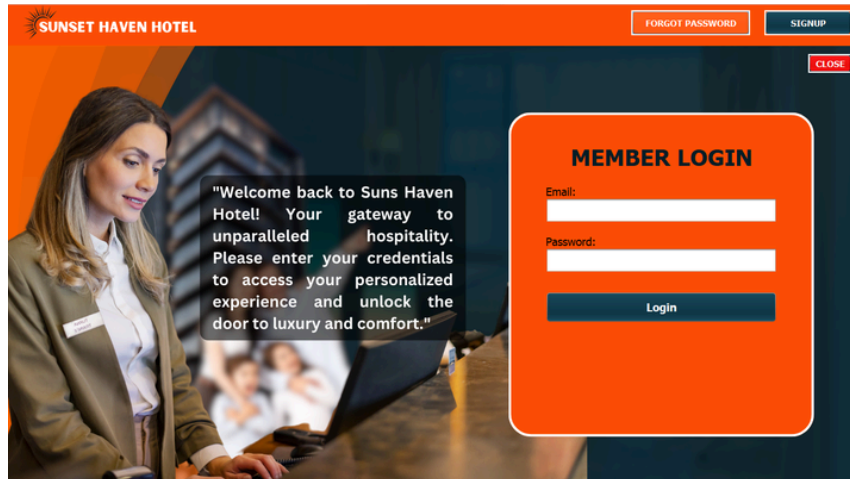

The welcome page of the website is the first point of entry, providing a brief introduction to the site's purpose, features, and content. It aims to engage customers and guide them further into the site.

2. SIGN IN / LOGIN PAGE / FORGOT PASSWORD PAGE

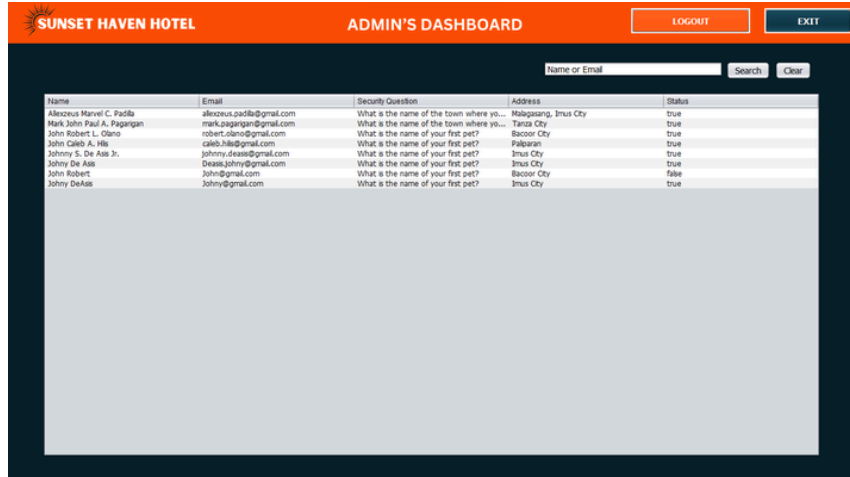

The signup, login, and forgot password pages are integral parts of the website's customer authentication and account management system. The signup page allows new customers to create accounts by providing basic information. The login page permits existing customers to access their accounts using their credentials. In case of forgotten login details, the forgot password page facilitates password reset.

3. ADMIN PAGE

The admin page of the website is a secure area for authorized staff to manage content, users, settings, and analytics, enabling tasks like content editing, user moderation, account management, configuration adjustments, and performance tracking.

4. HOME PAGE / MAIN PAGE

The home page of the website is the main landing page of the customers after logging in. It provides essential information and navigation links to help the customers explore further.

5. CREATE, RUDE, UPDATE, & DELETE PAGES

These pages facilitate customer interactions with the hotel's reservation system. Customers can create reservations, input personal information for check-in, and choose available rooms. Additionally, they can check out independently and receive a copy of their bill during their stay.

CLICK ON TABLE ROW TO OPEN BILL

6. WAYBILL

This additional function on our website allows customers to obtain a copy of their bill upon checking out during their stay. Upon completion of the check-out process, the system redirects customers to a file containing their bill copy for their records.

V. CONCLUSION

In summary, our hotel management system aims to streamline the reservation process for customers. We've created a user-friendly platform that enables customers to navigate the site effortlessly. Our system ensures a hassle-free booking experience, empowering customers to reserve their hotel rooms with ease and convenience.
